Address : Building Materials Mall, Gate 1, Warsan 3, Dubai, UAE

METHOD OF STATEMENT

Checking the surface preparation and site for our work Road base application with compaction, if required Shuttering work with wooden plywood, as per design

Application of bonding agent if required

Application of welded steel mesh

Application of screed as per mix design, usually 30N, 10mm aggregate with polypropylene fiber 700 gm per cubic meter

Waiting until the blending water of the concrete leave from concrete surface

Start the dry shake approved color approximately 3.5 KG for each SQM

Trowel the color by magnesium trowel and dry shake another coat and trowel it by aluminum trowel till the

Become all in as per approved color

Spray the release powder as it is on the top of color surface

Stamping by approved stamp

Making the control joint approximately after every 3×3mtr or as per the design requirement

Application of two coats of A-Z Super Sealer

MATERIAL SUBMITTAL AND DETAILS

• Color Hardener.....

Color Hardener is manufactured with the finest UV-resistant pigments and premium aggregates. Color Hardener is designed to work with imprinting tools to produce clear, sharp impressions that enhance the finished appearance of any hard landscape. Color Hardener is the ready-to-use, powdered dry-shake hardener used to add color into the surface of freshly placed concrete. It produces a hard, long-wearing, abrasion-resistant surface

• Release....

A release agent is a chemical used to prevent other materials from bonding to surfaces. It can provide a solution in processes involving mold release, die-cast release, plastic release, adhesive release, and tire and web release. Release agents provide the critical barrier between a molding surface and the substrate, facilitating separation of the cured part from the mold. Without such a barrier in place the substrate would become fused to the mold surface, resulting in difficult cleanup and dramatic loss in production efficiency. Even when a release agent is used, factors such as irregular applications or improper release agent choice will have a dramatic effect on the quality and consistency of your finished product.

• Sealer.....

You've finally installed the decorative concrete masterpiece of your dreams. Maybe it's a pattern-stamped pool deck or patio, an interlocking paver driveway, an acid-stained floor, or an exposed-aggregate walkway. Protecting and properly maintaining that concrete will keep it looking spectacular for many years to come while extending its service life. And even if the surface begins to show wear after years of exposure to traffic and the environment, you can often restore its original beauty with special cleaning, stain removal, and polishing products.
